

The AMRT Certification covers mold and sewage remediation techniques while the MRS Certification only covers mold remediation.

The AMRT requires that technicians first obtain the WRT Certification and pass with a 75% or higher before they can obtain the AMRT.

Technicians must also take the AMRT course and pass the AMRT exam with a 75% or higher.

The MRS requires that technicians have 12+ months of verifiable field experience working in mold remediation. There is no course associated with the MRS Certification. The MRS is also an ANAB Accredited Certification, while the AMRT is not.
